

Math 1A  
Precalculus Review

Please read the direction for each question carefully. Show all your work on engineering paper.

1. Solve each equation algebraically. **No calculator** may be used to solve these equations. **Exact answers only no decimals.**

a)  $\frac{t}{t+1} + \frac{5}{t} = \frac{1}{t^2+t}$

b)  $\sqrt{3y+1} - 1 = \sqrt{y+4}$

c)  $2x(x+4) = 3(2x-3)$

d)  $5^{2y+1} = 42$

e)  $\log_8(x+6) = 1 - \log_8(x+4)$

f)  $2\cos^2(\theta) - 3\cos(\theta) + 1 = 0$

2. Consider the function  $f(x) = (x^2 - 4x - 12) \cdot e^{-x/4}$ .

a) Use your graphing calculator to sketch  $f(x)$  in the window  $[-3, 30]_5 \times [-20, 20]_5$ .

b) Find all the zeros for  $f(x)$  algebraically, and verify those zeros with your graphing calculator.

c) Using your graphing calculator, find all extrema for  $f(x)$  in the given window. Identify them as relative or absolute.

d) Find  $\lim_{x \rightarrow \infty} f(x)$  and  $\lim_{x \rightarrow -\infty} f(x)$ , that is find the right and left-hand behavior for  $f(x)$ .

3. Use fundamental identities and algebra to prove the following identities.

a) Prove:  $\cos x + \sin x \cdot \tan x = \sec x$

b) Prove:  $\frac{\cos \theta \cdot \cot \theta}{1 - \sin \theta} - 1 = \csc \theta$

4. A triangular plot of land has two sides of length 515 feet, and 475 feet with the angle between the two sides of  $47^\circ$ . Determine the following.
- The length of the other side and the other two angles of the plot of land.
  - The area of the plot.

5. An open box is to be made from a piece of sheet metal 22 inches by 50 inches on a side by cutting equal squares from the corners and turning up the sides, see figure below.

- Find the dimensions of the box, height, length, and width in terms of  $x$ .
- Determine the function  $V(x)$  and its domain that would calculate the volume of all such boxes.
- Graph your function from part (b) on your graphing calculator. Use your domain from part (c) for the  $x$ -min and  $x$ -max and use the interval  $[0, 2700]_{500}$  for the  $y$ -min and  $y$ -max. Find the dimensions of the open box and the maximum volume.
